

MovieMeister.AI

'MovieMeister.AI' is a movie streaming service/application which helps users discover and watch movies. MovieMeister.AI is designed to provide users with a personalized movie experience. The AI algorithms in the background will track the user's preferences and continuously adjust the recommendations accordingly. The app contains a search bar for the users to search for their favorite movies and watch them in the app. It also contains AI based recommendations to suggest new movies and generate watchlists based on the movies a particular user prefers. The app recommends movies to the user based on search history, likes and dislikes, and also what's trending in their geographic region. The app also has an option to send notifications to the user about upcoming movie release dates.

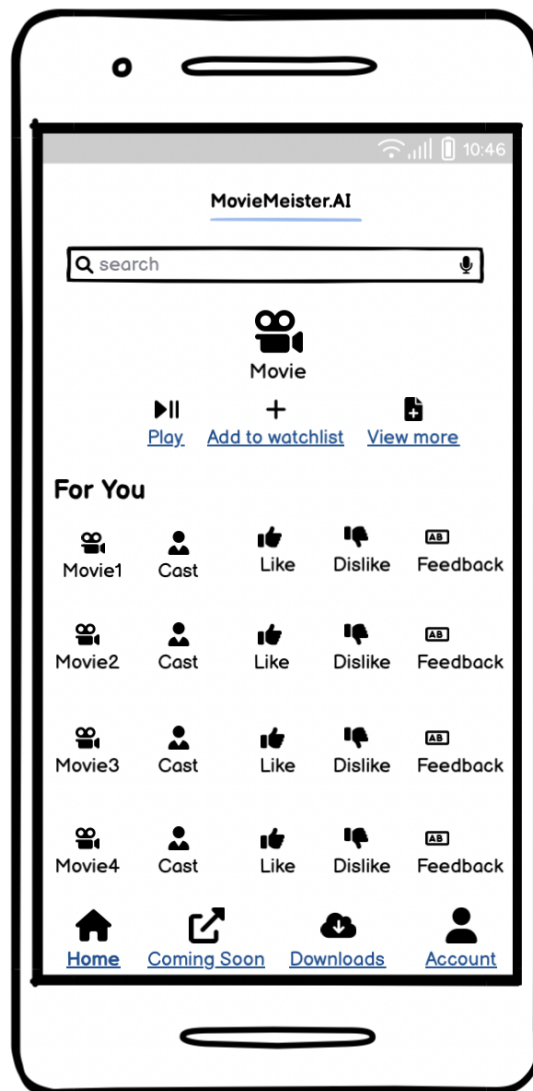

The main user needs that MovieMeister.AI is intended to address are:

1. To find relevant and personalized movie recommendations.
2. To keep track of movies watched and organize a watchlist.
3. To receive notifications about new releases, upcoming movie events and special screenings.

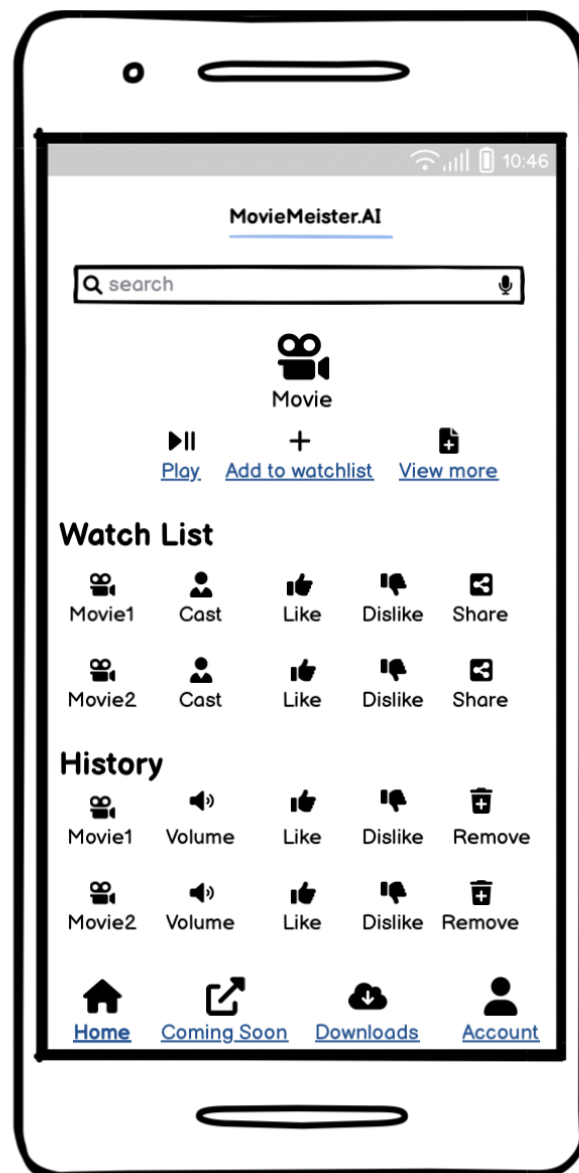

Feature 1 - Personalized Recommendation System

The recommendation system is powered by AI and takes into account the user's preferences and movie watching history to provide relevant and personalized suggestions. The user can rate movies and provide feedback to refine the recommendations over time. The recommendations are presented in a clean and easily readable format, with options to quickly add a movie to the watchlist or view more details.

Feature 2 - Movie Organizer

The movie organizer allows users to keep track of movies they have watched and create a watchlist of movies they would like to see. The feature supports multi-modal input, making it easy to add movies to the watchlist through voice commands, text input, or scanning a movie poster. The watchlist is persistent and available across devices, so the user can access their preferences at any time.

Feature 3 - Movie Event Notifications

The movie event notifications feature sends personalized notifications about new releases, upcoming movie events, and special screenings in the user's area. The notifications are context-aware, taking into account the user's location and movie preferences, and are customizable so the user can receive notifications about specific movies or genres and adjust the frequency of notifications as desired. The notifications are displayed in a clean and easily readable format, with options to quickly view more details or dismiss the notification.
